quality seeds
for better yeild...

info@greenfieldseeds.in | www.greenfieldseeds.in

“We take immense pride in meeting all our commitments to our valuable customers”

Founded in 2008, Green Field Seeds is an agricultural seeds production and export organization based in India. We believe and strive to deliver high quality crops for a better and healthier world by supporting the farmers with outstanding seeds.

While we are relatively new organization, we share our history with a decades old company initiated by Rughanathbhai Padhiyar. He started a company focusing on vegetable seeds business in 1956 as a seeds trader by the name of M/s. Rughanathbhai & Sons, which we took forward in 2008 by establishing Green Field Seeds. We aspire to become one of the leading and lasting organizations in our business niche and want to deliver finest quality agricultural seeds to support quality farming across the globe.

We majorly work in multiplication, breeding sales & marketing of Vegetable Seeds, Field Crops & Fodder

Crops. The potential crops for which we possess superior quality seeds include musk melon, brinjal, carrot, beans, cucumber, okra, tomato, watermelon, all sorts of gourds, and hot peppers.

We export vegetable and fruit seeds to a wide array of countries subsuming Thailand, Vietnam, Bangladesh, Pakistan, and some countries of Africa. We emphasize on delivering finest quality seeds at the most competitive prices to promote good farming. We are focused towards empowering the farmers, both small and large, to produce optimum from their land while conserving some of the most valuable and vital natural resources like energy and water. We use technological advances to develop the most productive seeds for the farmers that can aid them in reducing their on-farm costs, and supporting their on-farm productivity along with efficiency.

Our Inspiration

Late Mr. Rughanathbhai Padhiyar.

1925

Plant : Semi Determinate Type,good Branching Habit
Fruit Type : Green Shoulder,acidic Hybrid,round Shape
Average Weight : 100-120 Gms,
First Picking : Early Variety, fruiting Starts In 60-65 Days After Transplanting
Specifications : Good Taste, Good Keeping Quality, TLCV Resistant Variety, Very High Yielding, Excellent for Early Monsoon

750

Plant : Semi Determinate Type,good Foliage
Fruit Type : Green Shoulder,acidic Hybrid,round Shape,
Average Weight : 90-100 Gms,
First Picking : 70-75 Days After Transplanting,
Specifications : Excellent For Long Distance Transportation, TLCV Resistant Variety,high Yielding Variety,

Ajeet

Plant : Semi Determinate Type Hybrid,well Branched
Fruit Type : Green Shoulder, Acidic Hybrid, Round Shape
Average Weight : 90-100 Gms
First Picking : Medium Late Variety,long Standing Variety
Specifications : Very Hard Fruits Excellent Long Distance For Transportations, TLCV Resistant

Maruthi

Plant : Determinate Type Hybrids,
Fruit Type : White Shoulder Variety, Round Shape
Average Weight : 80-90 Gms,
First Picking : 60-65 Days After Transplanting
Specifications : Excellent For Early Monsoon Season

2550

Plant : Semi Determinate Hybrid With Good Foliage
Fruit Type : Round Shape,
Average Weight : 80-110 Gms
First Picking : 65-70 Days After Transplanting,
Specifications : Heat Tolerant Variety, Nematodes Tolerance is Significant Trait Of 2550

Kohenoor

Plant : Semi Determinate Type Hybrid, Good Foliage, Well Branched
Fruit Type : Oval Shape & Shiny Red Colour
Average Weight : 100-120gms
First Picking : 65-70 Days After Transplanting,
Specifications : Good Adaptability & Good Disease Tolerance To Bacterial Wilt, Late Blight and Highly Resistant From Tylcv & Fusarium Wilt

Viraat

Plant : Semi Determinate Type Hybrid,
Fruit Type : Oblong Shape and Shiny Red Colour
Average Weight : 90-110 Gms
First Picking : 60-65 Days After Transplanting
Specifications : Tylcv Resistant Variety, High Yielding and Good For Transportations

Mahaveer

Plant : Semi Determinate Type Hybrid,good Foliage
Fruit Type : Oval Shape
Average Weight : 90-100gms
First Picking : 70-75 Days After Transplanting
Specifications : Excellent Variety For Stacking Farming,high Yielding Variety, Tylcv Resistant Variety, Resistant From Bacterial Wilt

Basant

Plant : Indeterminate plant habit
Fruit type : Attractive red colour,round shape
Average weight : 90-110 gms
First Picking : Early variety, Fruiting started in 60-65 days after transplanting
Specifications : Good Taste, Good keeping quality, TYLCV resistant variety, Very high yielding, Suitable where indeterminate variety has a demand

Nawab

Sowing Time : November To February-march
Fruit Picking : 75-80 Days After Sowing
No.of Fruits Per Plant : 2-3 Fruits Per Plant
Fruit Character : Oblong Shape, Skin Light Green With Dark Green Stripes, Red Flesh In Colour, Very Sweet in Taste
Average Weight : 10-12 Kgs
Specifications : Excellent Variety For Long Distance Transportation

Brahma

Sowing Time : November To March
Fruti Picking : 60-65 Days After Sowing,
No.of Fruits Per Plant : 3-4 Fruits Per Plant
Fruit Character : Oblong Shape, Skin Black, Red Flesh, Sweetness Is Good
Average Weight : 7-9 Kgs
Specifications : Excellent Variety For Long Distance Transportations & Tunnel Farming

Atlas

Sowing Time : November To March
Fruti Picking : 65-70 Days After Sowing
No.of Fruits Per Plant : 4-5 Fruits Per Plant
Fruit Character : Round Shape Sugar Baby Type Hybrid, Dark Black Colour,red Flesh,sweetness Is Excellent
Average Weight : 9-11 Kgs
Specifications : Excellent Variety For Long Distance Transportations & Tunnel Farming

Teja

Sowing Time : November - February/March
Fruti Picking : 60-65 Days After Sowing
No.of Fruits Per Plant : 5-6 Fruits Per Plant
Fruit Character : Oblong Shape, Skin Light Green With Dark Green Stripes, Red Flesh In Colour, Very Sweet In Taste
Average Weight : 6-8 Kgs
Specifications : Best Quality For The Farmers Who Like Early Variety

Sugar 74

Sowing Time : June-july To March
Fruti Picking : After 60-65 Days After Sowing
No.of Fruits Per Plant : 4-5 Fruits Per Plant
Fruit Character : Icebox Type Hybrid,oblong Shape,dark Black Skin Colour, Red Flesh, High Sugar Content,
Average Weight : 3-5 Kgs
Specifications : Excellent Hybrid In Icebox Segment & Long Distance Transportation

Golden Glory

Sowing Time : May-july & January-march
Fruti Picking : After 60-65 Days After Sowing
Fruit Character : A Vigorous Plant Habit,cantaloupe Segment Hybrid,a Very High Yielding Variety, 12-14% Sugar Content, Dense Netting, Orange Flesh,
Average Weight : 1.25-1.5 Kgs
Specifications : A Very Popular Hybrids In Northern And Southern India

Maha Dhan

Sowing Time : May-july & January-march
Fruti Picking : After 65-70 Days After Sowing
Fruit Character : A Vigorous Plant Habit,cantaloupe Segment Hybrid, Very High Yielding Variety, 12-14% Sugar Content, Dense Netting, Orange Flesh
Average Weight : 1.5-2 Kgs
Specifications : Excellent Variety For Long Distance Transportation

Khusboo

Sowing Time : Round The Year Except Summer Season
Fruit Picking : 75-80 Days After Sowing,
Fruit Characters : A Yellow Canary Type Hybrid,round To Oval Shape With Cramish Flesh,14-16% Sugar Content,very Sweet Taste,
Average Weight : 1.25-1.75 Kgs,
Specifications : Excellent Variety For Export Market

Golden Honey

Sowing Time : May-july & January-march
Fruit Picking : After 60-65 Days After Sowing
Fruit Character : A Vigorous Plant Habit,cantaloupe Segment Hybrid, Very High Yielding Variety, 12-14% Sugar Content, Dense Netting, Orange Flesh
Average Weight : 1.25-1.5 Kgs
Specifications : Very Good For Turing Pharmacy

Milestone

Sowing Time : January-march
Fruti Picking : 70-75 Days After Sowing
Fruit Character : A Galia Type Hybrid,round Shape,fine Yellow Netted, Green Flesh, High Sugar Content
Average Weight : 1.5-2 Kgs
Specifications : High Value Products, Farmers Are Getting Good Prices From The Market

Ganesh

Plant Type : Plants Are Vigorous,excellent Early Maturing Hybrid
Fruit Characters : 15-17 Cm Length, 1.5-2 Cm Dia., Light Green Colour, Waxy Skin, High Yielding Variety, Harvesting Start From 50-55 Days After Transplanting,
Pungency : Mild Pungency
Specification : Performing Excellent In Rajasthan And Gujarat

Ajmeri

Plant Type : Umbrella Type Plant,vigorous Plant Habit,
Fruit Characters : 18-20 Cm Length, 2-2.5 Cm Diameter,green Colour And Long Fruits, High Yielding Variety
Pungency : Medium Pungency
Specifications : Excellent Performance In Rajasthan And Mp

905

Plant Type : A Vigorous Plant Habit,
Fruit Characters : Dual Purpose Variety, 8-11 Cm Length,0.8-1.2 Cm Dia., Dark Green Colour, High Yielding Variety
Pungency : High Pungency
Specifications : Excellent Performance In Uttar Pradesh, Long Distance Transportation

HP55

Plant Type : A Vigorous Plant Habit,
Fruit Characters : Dual Purpose Variety, 8-11 Cm Length,0.8-1.2 Cm Dia., Dark Green Colour, High Yielding Variety
Pungency : High Pungency
Specifications : Suitable For Punjab-haryana, Long Distance Transportation,

Chandra

Plant Type : A Vigorous Plant Habit, Umbrella Type Plant
Fruit Characters : Dual Purpose Variety, 14-16 Cm Length,1.2-2 Cm Dia., Green Colour, High Yielding Variety
Pungency : Medium Pungency
Specification : Good For Transaction ,suitable For Rajasthan, Long Distance Transportation,

Amba

Plant type : Plants Are Vigorous,excellent Early Maturing Hybrid
Fruit Characters : Dual Purpose Type Hybrid, 15-17 Cm Length, 1.5-2 Cm Dia., Green Colour, Waxy Skin, High Yielding Variety, Harvesting Start From 50-55 Days After Transplanting
Pungency : Mild Pungency
Specification : Performing Excellent In Rajasthan And Gujarat

525

Plant Type : Medium Tall,prolific Bearing,pendant Fruit Habit,
Fruit Colour : Green Colour
Fruit Characters : Dual Purpose Variety, 8-11 Cm Length, 0.8-1 Cm Diameter, High Yielding Variety
Pungency : High Pungency
Specifications : Excellent Variety For Long Distance Transportation

Hot Asia

Plant type : Erect plant habit,2-2.5 plant height
Fruit characters: 5-7 c.m length, 0.5 cm. dia, medium green colour, Fruit surface smooth, At the ripening stage excellent red colour
Pungency: High pungency
Specification: Fruits length are short, High yielding variety, Attractive green colour

Commander 148

Plant type : A vigorous plant habit,Umbrella type plant structure
Fruit characters: Dual puropose variety, 18-20 cm length, 2-3 cm dia., green colour,
Pungency: Medium
Specification: Suitable for Rajasthan, Haryana & Madhya pradesh

Lakshshmi

Plant type : Plants are vigorous,excellent early maturing hybrid
Fruit characters : Fruits are green colour, 14-16 cm length, 2.5-3 cm dia, Average weight 30-35 gms, Harvesting starts in 55-60 days after transplanting
Pungency : Mild pungency
Specification : Good variety for dual purpose, Specially for bhajji and stuffing

Anant

Plant : A Vigorous Plant Habit
Sowing Time : Summer & Rainy Season
Fruit Type : Shiny Green Colour, Spineless Fruit, Sleek & Straight
Fruit Length : 5-7 Inches
First Picking : 55-60 Days After Sowing
Specifications : A Very High Yielding, Long Fruiting Cycle, Good Keeping Quality, Excellent For Tunnel Farming, Prolific Bearing

King

Plant : A Vigorous Plant Habit
Fruit Type : Shiny Green Colour, Spineless Fruit, Sleek & Straight
Fruit Length : 4-5 Inches
First Picking : 50-60 Days After Sowing
Specifications : A Very High Yielding,Long Fruiting Cycle, Good Keeping Quality

Diamond

Plant : A Vigorous Plant Habit
Fruit Type : Shiny Green Colour, Spiny Fruit, Sleek & Straight
Fruit Length : 7-8 Inches
First Picking : 55-60 Days After Sowing
Specifications : A Very High Yielding,Long Fruiting Cycle,good Keeping Quality, Prolific Bearing

Don

Plant : A Vigorous Plant Habit, Wide Adaptability

Fruit Type : Shiny Green Colour,spiny Fruit, Slek & Straight

Fruit Length : 5-7 Inches

First Picking : 55-60 Days After Sowing

Specifications : A Very High Yielding, Long Fruiting Cycle, Excellent Variety For Long Distance Transportations

6006

Plant : A Vigorous Plant Habit,wide Adaptability

Fruit Type : Dark Green Colour,spiny Fruit, Slek & Straight

Fruit Length : 5-7 Inches

First Picking : After 45-50 Days After Sowing

Specifications : A Very High Yielding,long Fruiting Cycle,good Keeping Quality

Leela

Plant : Long Veins,well Branched

Sowing Time : Summer And Rainy Season

Fruit Character : A Very Early Variety, Dark Green Colour, Slek And Straight, Very Crispy, 25-30 Cm, 120-130 Gms Weight

First Picking : 35-40 Days After Sowing,

Specifications : Very Attractive Fruits, Very High Yielding, Suitable For Long Distance Transportation

Sita

Plant : A Vigorous Plant Habit

Sowing Time : Summer And Rainy Season

Fruit Character : Dark Green Colour,extra Long And Straight,very Crispy,30-35 Cm,130-150 Gms Weight

First Picking : 40-45 Days After Sowing,

Specifications : Very Attractive Green Colour Fruits, Very High Yielding, Very Good Keeping Quality

Preeti

Plant : A Vigorous Plant Habit

Sowing Time : Summer And Rainy Season

Fruit Characters : A Very Early Variety,light Green Colour,slek And Straight,very Crispy,30-35 Cm,

Average Weight : 35-40 Days After Sowing,

Specifications : Very Attractive Fruits, Very High Yielding, Very Good Keeping Quality,

Chetan

Sowing Time : Long Veins

First Picking : 50-55 Days After Sowing

Fruit : Shining Green Colour,cylindrical Shape

Fruit Length : 30-35 Cm. Long,straight,

Specification : Fruits Retain Green Colour,high Yielding Fruiting, Suitable For Long Distance Transportation

Riddhi

Plant : Long Veins,a Vigorous Plant Habit

First Picking: 55-60 Days After Sowing

Fruit : Shining Green Colour, Cylindrical Long Shape

Fruit Length : 35-40 Cm. Long,straight,

Specifications : Fruits Retain Green Colour,high Yielding Fruiting, Suitable For Long Distance Transportation

Komal 50

Plant : Long Veins

First Picking : 55-60 Days After Sowing

Fruit : Shiny Green Colour,bulb Shape

Fruit Weight : 150-200 Gms

Specification : Fruits Retain Green Colour,high Yielding Fruiting, Suitable Variety For Northern And Eastern India

786

Plant : Long Veins

First Picking : 55-60 Days After Sowing,

Fruit : Shiny Green Colour, Round To Flat Shape

Fruit Weight : 400-500 Gms,

Specifications : Fruits Retain Green Colour, High Yielding Fruiting, Suitable For Long Distance Transportation

Rama

Plant : A Vigorous Plant Habit

Sowing Time : Summer And Rainy Season

Fruit Characters : First Fruit Are Ready To Harvest In 40-45 Days After Sowing, 40-45 Cm Length, Attractive Green Colour, Very Crispy In Taste, 250-300 Gms Weight,

Specifications : Bitter Free Fruits, High Yielding, Suitable For Long Distance Transportations

Krishna

Plant : A Vigorous Plant Habit

Sowing Time : Summer And Rainy Season

Fruit Characters : First Fruit Are Ready To Harvest In 40-45 Days After Sowing,30-35 Cm Length, Attractive Medium Green Colour,very Crispy In Taste, 200-250 Gms Weight

Specifications : Bitter Free Fruits, High Yielding, Suitable For Long Distance Transportations, Suitable Variety For Southern India

Madhav

Plant : A Vigorous Plant Habit,well Branched

Sowing Time : Summer And Rainy Season

Fruit Characters : First Fruit Are Ready To Harvest In 40-45 Days After Sowing, 45-50 Cm Length, Attractive Green Colour,very Crispy In Taste, 250-300 Gms Weight

Specification : Bitter Free Fruits,high Yielding,suitable For Long Distance Transportations, Suitable For Throughout India

Meenaxi

Plant : 5-6 Feet Plant, Well Branched, Vigorous Plant Habit

Sowing Time : Round The Year As Per Different Climatic Condition

Fruit Characters : 5-6 Inches,very Slek,dark Green Colour, 5 Ridges, No Visibility Of Seeds Even At Maturity

Harvesting : After 45-50 Days After Sowing,

Specification : High Yielding Variety, Tolerant To Yvmv, Excellent Variety For Long Distance Transportations,

Ambika

Plant : 5-6 Feet Plant,well Branched,a Vigorous Plant Habit

Sowing Time : Round The Year As Per Different Climatic Condition

Furit Character : 5-6 Inches, Very Slek, Dark Green Colour, 5 Ridges, No Visibility Of Seeds Even At Maturity

Harvesting : 50-55 Days After Sowing,

Specifications : High Yielding Variety, Tolerant To Yvmv, lcv., Excellent For Long Distance Transportations

Soniya Research

Plant : Medium Tall And Prolific Bearing

Sowing Time : Round The Year As Per Different Climatic Condition

Fruit Character : 12-14 Cm Length, Dark Green Colour Fruits

First Picking : 50-60 Days After Sowing

Specifications : Comparatively Giving Good Performance In Against Of Hybrid Variety

250

Plant : Medium Tall And Prolific Bearing

Sowing Time : Round The Year As Per Different Climatic Condition

Fruit Character : 12-14 Cm Length,very Dark Green Colour Fruits, No Visibility Of Seeds Even At Maturity,

Specifications : A Very High Yielding Variety, Long Fruiting Cycle Till Extreme Winters And Summer

Kabir

Plant : A Vigorous Plant Habit,
Fruit Characters : 65-70 Days Maturity After Sowing,round To Flattish Round In Shape,yellowish Green Colour When Fruits Are Being Matured
Fruit Weight : 3-5 Kgs
Specifications : Medium Sized Hybrid With High Yielding, Standing Ability Is 80-90 Days After Sowing

Sultan

Plant : A Vigorous Plant Habit,
Fruit Characters : 80-85 Days Maturity After Sowing,big Round In Shape,dark Green Dots Skin
Fruit Weight : 8-10 Kgs
Specifications : Big Sized Hybrid With High Yielding,standing Ability Is 80-90 Days After Sowing, it Is Highly Tolerant To Powdery And Downey Mildew,

Bhisma

Plant : A Vigorous Plant Habit,
Fruit Character : 65-70 Days Maturity After Sowing, Round To Flattish Round In Shape, Dark Black Colour When Fruits Are Being Matured
Fruit Weight : 4-6 Kgs
Specifications : Medium Sized Hybrid With High Yielding,standing Ability Is 80-90 Days After Sowing

800

Plant : A Vigorous Plant Habit,
Fruit Character : 70-75 Days Maturity After Sowing,oval In Shape, Dark Green Colour With White Spotted
Fruit Weight : 7-9 Kgs
Specifications : Excellent Keeping Quality, Medium Sized Hybrid With High Yielding, Standing Ability Is 80-90 Days After Sowing

Makkhan

Plant : Makkhan Is A Vigorous Bushy With An Upright And Open Plant
Fruit Character : Multiple Time Harvests And Easy Picking, Nice Young Shiny Fruit Have A Round Shape, Light Gren Colour And Excellent Crispy Flavor
Maturity : First Harvest Start From 30-35 Days After Sowing
Specifications : Continous And Concentrated Fruit Setting Also Makes The Plant A Fabulous Ornamental For Gardening,

Mulayam 101

Plant : A Vigorous Bushy With An Upright And Open Plant
Fruit Character : Multiple Time Harvests And Easy Picking, Nice Young Shiny Fruit Have A Round Shape, Light Green Colour And Excellent Crispy Flavor
Maturity : First Harvest Start From 30-32 Days After Sowing
Specifications : No Visibility Of Seeds Even At Maturity

Zuchhni Green Magic

Plant : Green Magic Plants Is Erect With Short Node
Fruit Character : Fruit Is Cylindrical In Shape And High Qulity With White Flesh, 24-28 Cm Length, 4.5-5.5 Cm Dia. And 500-550 Gms Weight
Specifications : Poliflc With Rapid Fruit Growth,harvested In 50-55 Days After Sowing,

105

First Picking : 33-35 Days After Sowing
Fruit Length : 16 Cm And 4 Cm Dia.
Fruit Weight : 180-200 Gms
Fruit Colour : Medium Green Colour
Specifications : Heat Tolerance To Heat And High Yielding

305

First Harvest : 30-32 Days After Sowing
Fruit Length : 24-26 Cm And 4-4.5 Cm Dia.
Fruit Weight : 200-220 Gms
Fruit Colour : Medium Light Green Colour
Specifications : High Yielding And Good Keeping Quality

Keshav

First Picking : 35-38 Days After Sowing
Fruit Length : 20-25 Cm And 7-7.5 Cm Dia.
Fruit Weight : 180-200 Gms
Fruit Colour : Dark Green Colour Pointset Type Hybrid
Specifications : Gynocious Cucumber,very Small Seed Cavity, Excellent Fruit Quality, Very High Multi Virus Tolerance

Chamunda

First Picking : 35-37 Days After Sowing
Fruit Length : 16-18 Cm And 4.5 Cm Dia.
Fruit Weight : 150-200 Gms,
Fruit Colour : Dark Green Colour Type Hybrid,
Specifications : Good For Open Feilds , Pathernocarpic Type Hybrid,and High Disease Tolerance

Meera 235

First Picking : 33-35 Days After Sowing
Fruit Length : 22-24 Cm And 5-5.5 Cm Dia.
Fruit Weight : 200-250 Gms
Fruit Colour : Accretive Medium Green Colour
Specifications : Suitable For January To March Join Plant Habit High Yelder heat Tolerance And High Yielding

Durga

First Harvest : 50-55 Days After Transplanting
Fruit Characters : Light Purple Green Variegated,green Calyx
Average Weight : 90-100gms
Specifications : Oval Shape, Excellent Taste, Very Less Seeds

Navin

First Picking : 55-60 Days After Transplanting,
Fruit Characters : Big Size Fruits, Black Colour,green Calyx
Average Fruit : 150-200 Gms
Specifications : High Yielding,pecially For Stuffing And Bharta

Red Queen

Sowing Time : August To October Sowing,
Maturity : Attains Red Colour In 70-75 Days From Sowing
Roots : Straight, Tender Tapering, 30-32 Cm Length, Red Colour,
Specifications : Red Core,sweet,suitable For Distant Market

Madhumati

Plant Type : Dwarf Plant,2.5 Feet,
Pod Type : Dark Green Colour,15-18 Cm Length, Straight
First Picking : 45 Days After Sowing,
Specification : High Yielding Variety, Farmers Are Getting Good Price

Shiv Shakti

Plant Type : Dwarf Plant, 2.5-3 Feet
Pod Type : Dark Green Colour, 18-20 Cm Length, Straight
First Picking : 45-55 Days After Sowing,
Specification : High Yielding Variety, Farmers are Getting Good Price, Resistant from Golden Mosaic Virus,

Maha Shakti

Plant Type : Dwarf Plant, 2.5-3 Feet
Pod Type : Dark Green Colour, 25-28 Cm Length, Straight
First Picking : 45-50 Days After Sowing,
Specification : High Yielding Variety, Farmers are Getting Good Price, Resistant From Golden Mosaic Virus, Suitable for Bihar, UP & West Bengal

Geeta 51

Plant Type : 5-6 Feet Plant Height
First Picking : 30-35 Days after Sowing,
Pod Type : Sleek And Slender, Dark Green Colour Pods
Specifications : Excellent Performance In Summer and Monsoon, Famous In Regions With High Demand in Cluster Beans.

Suhasini

Plant : Dwarf Plant,height 1.5-2 Feet
Fsowing Time : Round The Year Sowing As Per Climatic Condition
Pods : Stringless, Super Fine Variety, Shiny Green, Fiberless
Pod Length : 14-15 C.M
First Picking : 45-50 Days after Sowing

Preeti

Sowing Time : August To October
Bulb Colour : Red Pinkish Type Colour
Maturity : Maturity In 90-110 Days After Transplanting
Specifications : Round Shape, 90-110 Gms Weight, Slightly Pungent

Kashmiri

Sowing Time : August To November
Bulb Colour : Dark Red Colour
Maturity : Maturity In 90-110 Days after Transplanting
Specifications : Round Shape, 90-110 Gms Weight, Pungent, Excellent for Long Distance Transportation

Deepali

Season : Early segment variety,may-july sowing,
Maturity days : 60-65 days after transplanting
Weight : 800-1000 Gms
Specifications : Dome shape, Attractive white colour

F-1 Hybrid Taj

Season: extra early hybrid cauliflower, May-July sowing
Maturity days: 45-50 days after transplanting
Weight : 600-800 gms weight
Specification: very compact and dome shape, Resistant from powdery mildew and excellent for rainy season

Other Varities

Palak

Radish White (Imported)

Peas GFS 910

Sweet Corn

Dolicho Beans (Apsa)

Hybrid Multicut Bajra

Lucern (Alfalafa 1 Yr.)

Lucern (Alfalafa 3 Yr.)
